National Performance Areas

**Infrastructure
Condition**

**Congestion Reduction
& System Reliability**

**Environmental
Sustainability**

**Freight Movement
& Economic Vitality**

Safety

**Reduced Project
Delivery Delays**

National Performance Areas

**Infrastructure
Condition**

Safety

National Performance Areas

Metropolitan planning organizations (MPOs) will be required to establish and use a performance-based approach to transportation decision making and development of transportation plans.

MAP-21 TAMP Requirements

- **TAM Objectives**
- **Asset Inventory/Condition**
- **Performance Gap**
- **Life Cycle cost**
- **Financial Plan**
- **Investment Strategies**
- **Risk Management**

National Performance Areas

**Infrastructure
Condition**

Why do we do PMS?

Limited resources

Staff turnover

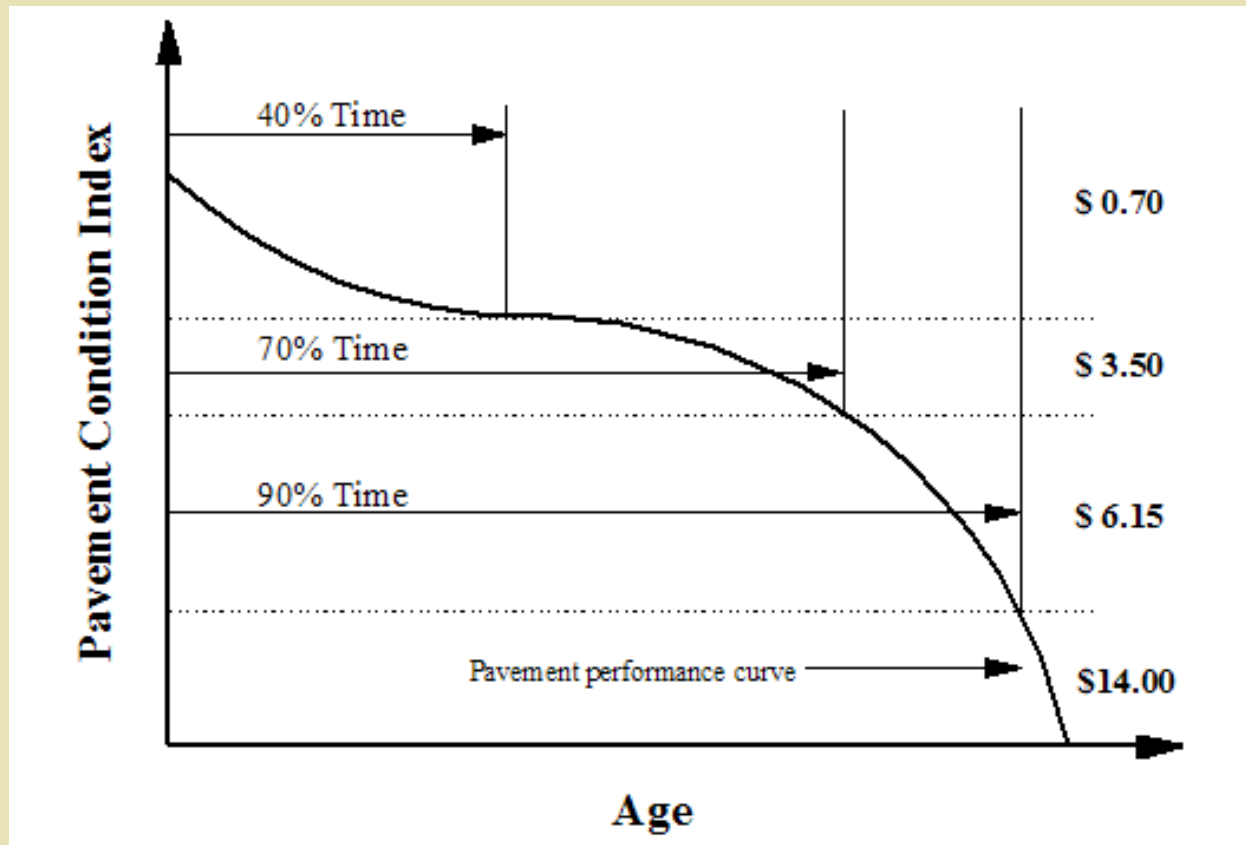

Consistent decisions

Structured/Objective process

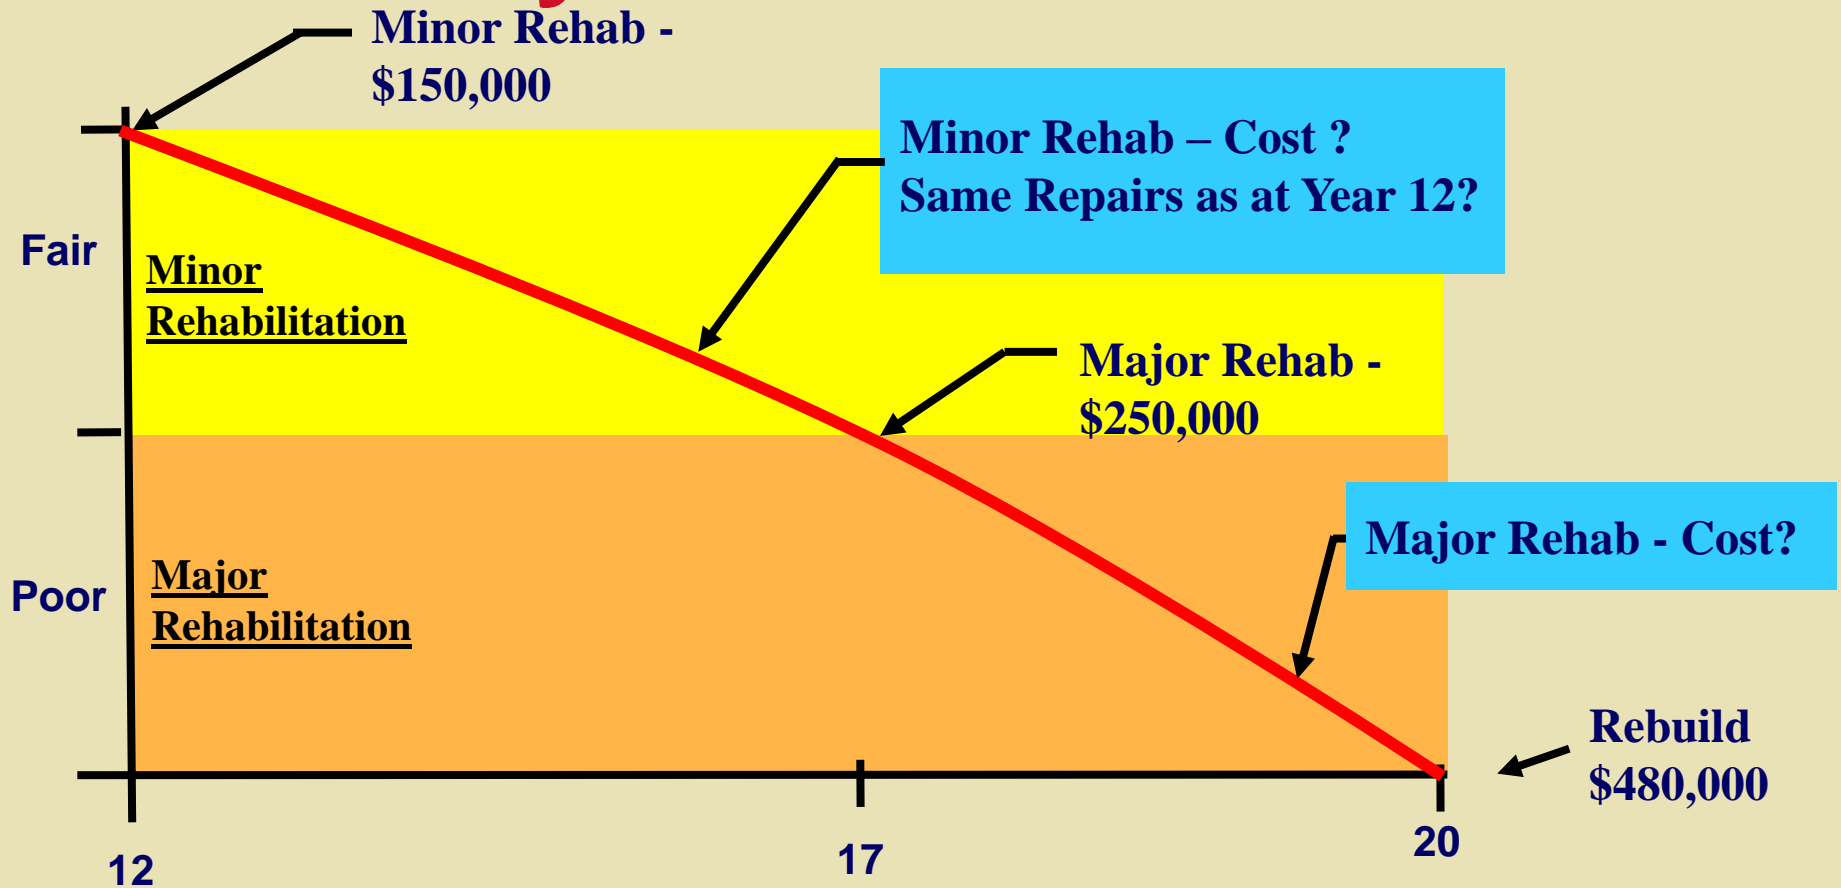

Improved condition

MAP-21

Why do we do PMS?

Why do we do PMS?

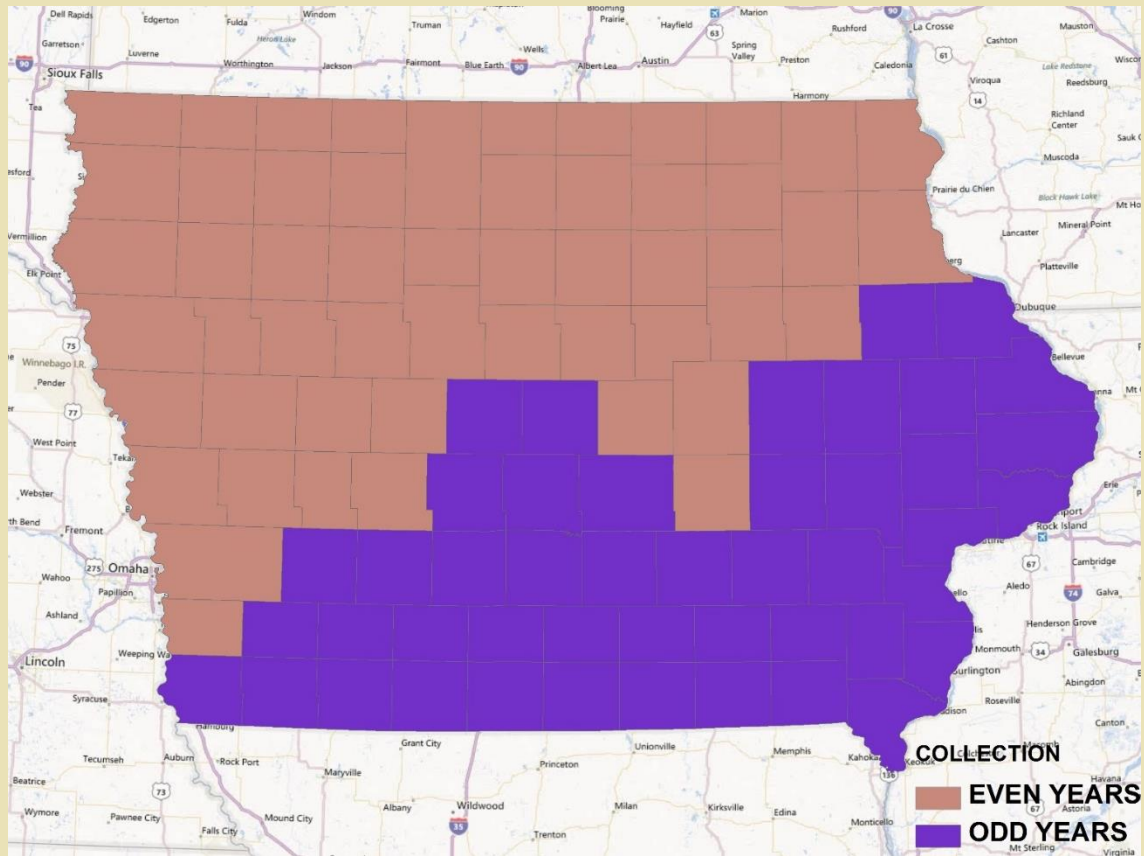

PMS Components

- Condition Data
- Database (**Data Integration-GIS/GPS**)
- Performance Forecasting
- Decision Support Tools

The goal of pavement management is to apply the right treatment, to the right pavement, at the right time

- Can't fix a problem you don't know you have
- Need to know the symptoms to determine a treatment

Data collection

Contacting local agencies

- ☐ Half the state is collected every year
- ☐ Information is sent out via the DOT to local agencies in the regions to be collected
- ☐ Additional services such as ROW video log and pavement management software

Raw Distress Data

Raw Distress Data

100% coverage

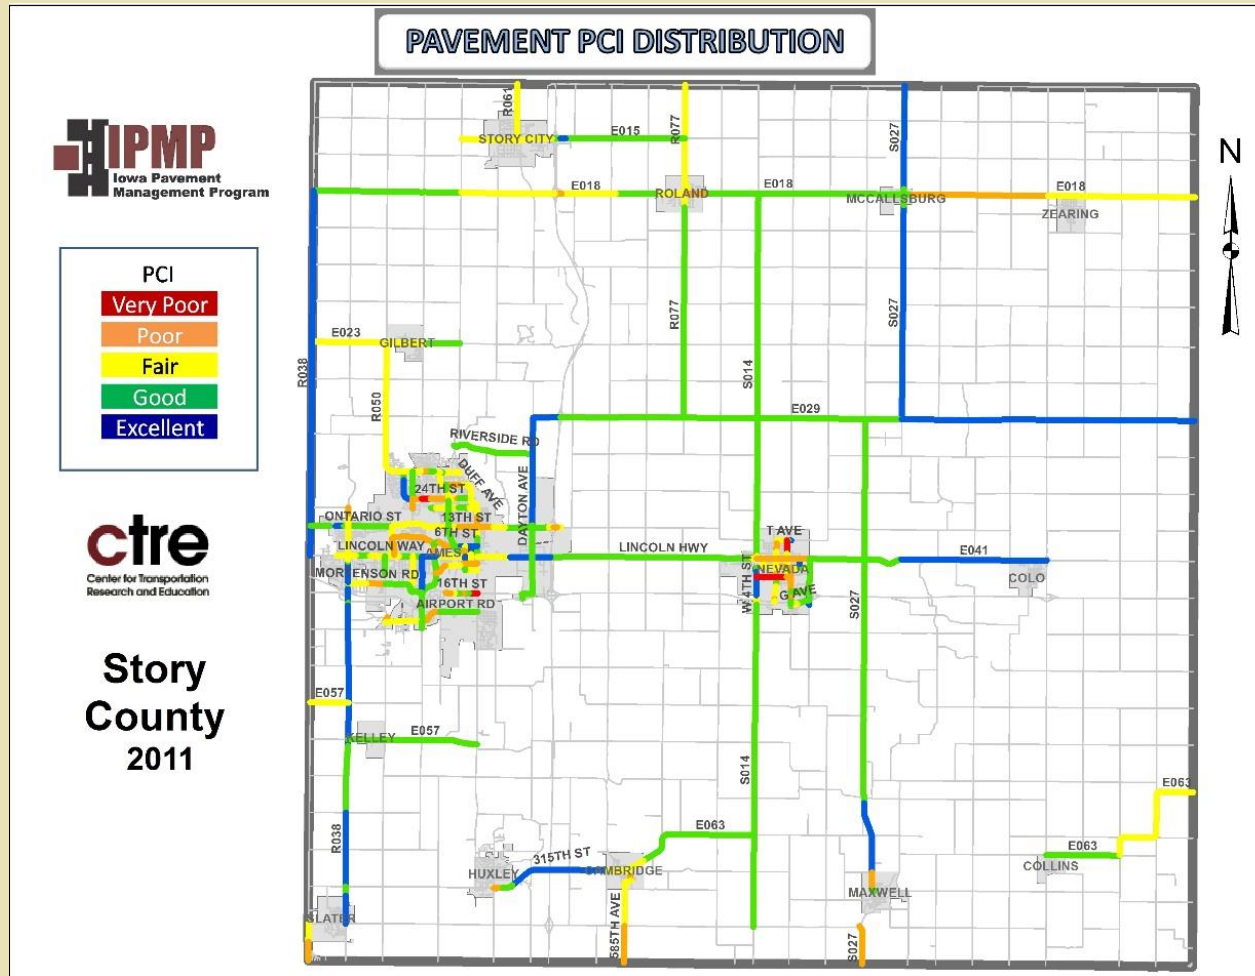

- ☐ Roughness (IRI) – left, right
- ☐ Patch – good, bad
- ☐ Rutting – left, right
- ☐ Patch count
- ☐ Alligator cracking – LMH
- ☐ Durability cracking - MH
- ☐ Transverse cracking – LMH
- ☐ Joint spalling – MH
- ☐ Longitudinal cracking – LMH
- ☐ Faulting – left, right - 1234
- ☐ Longitudinal wheelpath cracking - LMH

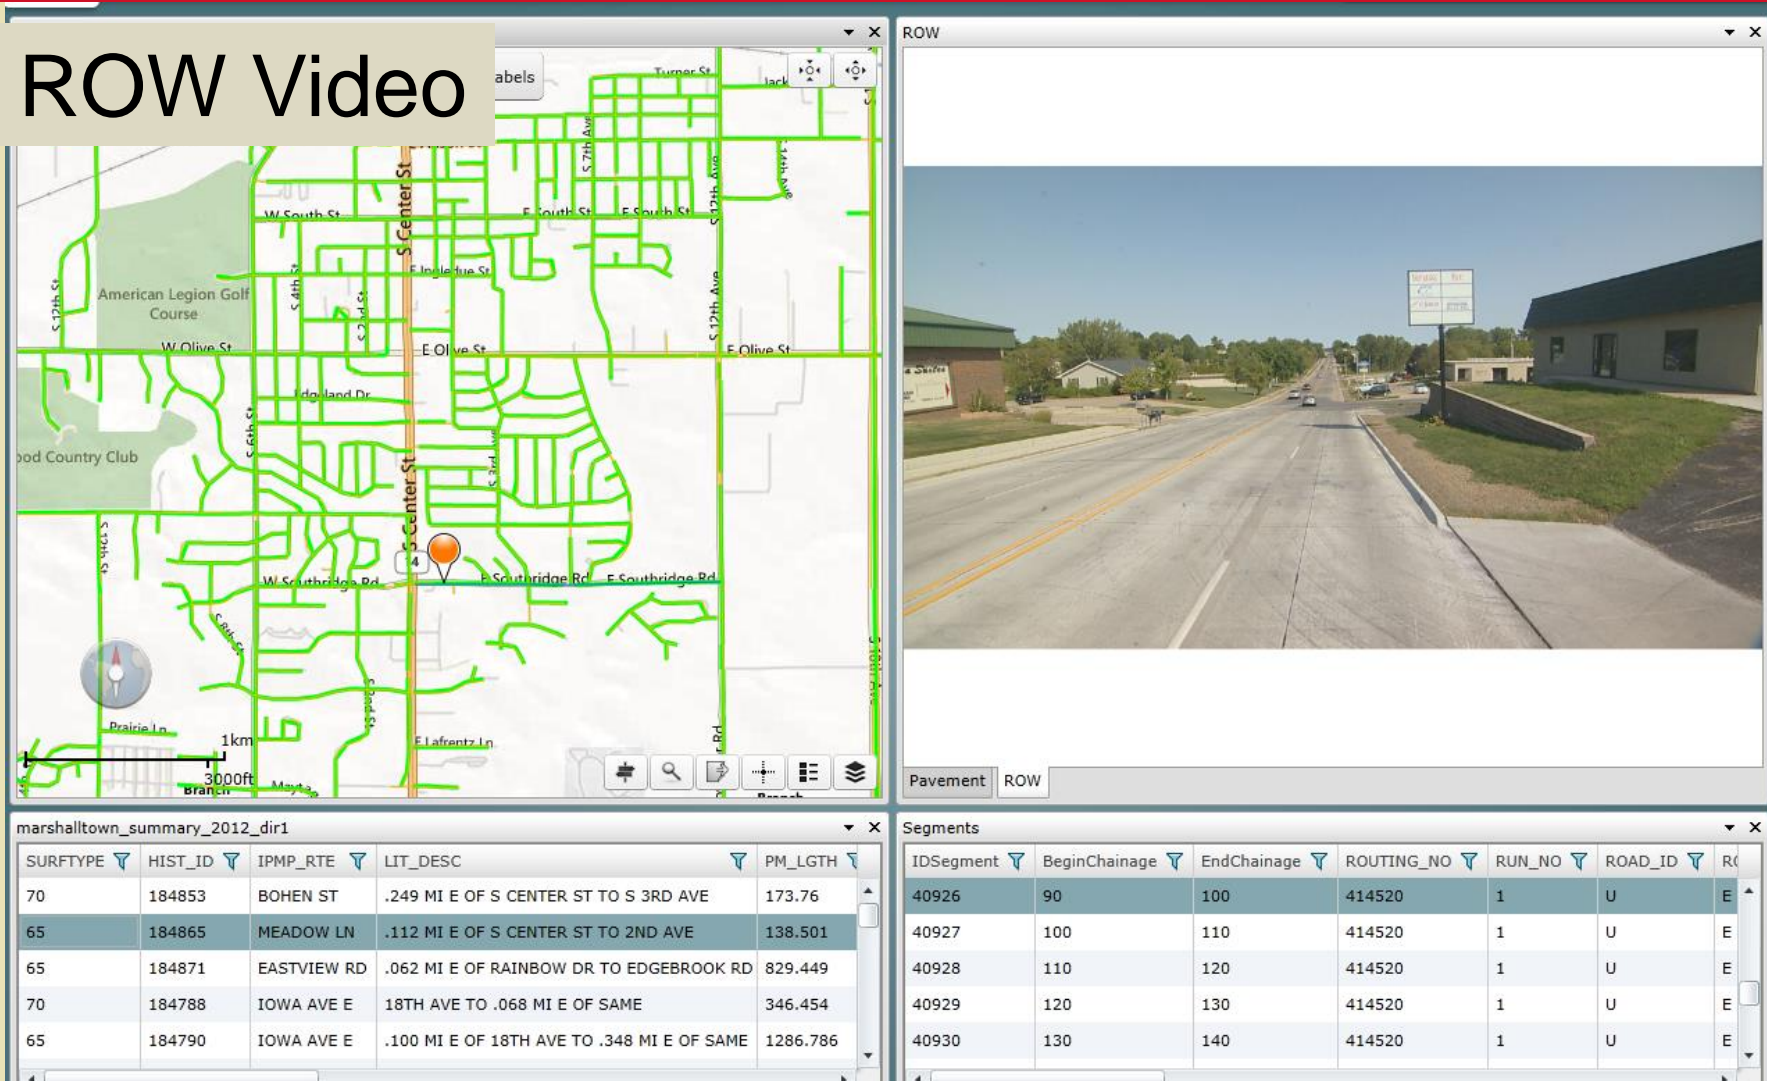

Deliverables

Pavement condition data

ROW Video

Deliverables

ROW Video

The screenshot displays a software interface with three main components:

- Map View:** A map of a street grid in Marshalltown, Iowa. A red pin is located at the intersection of S Center St and E Southridge Rd. The map includes labels for streets like W South St, E South St, E Olive St, and E Southridge Rd. A scale bar indicates 1 km and 3000 ft.
- Video View:** A video player showing a street-level view of the same location. The video shows a multi-lane road with cars, a grassy shoulder, and a building in the background. A sign for "EAST 6" is visible on the right.
- Data Tables:** Two tables are displayed at the bottom.

Table 1: marshalltown_summary_2012_dir1

Iowa Traffic Safety Data Service

providing crash data, analysis and support

Overview

- **FREE** quick-response service
- Funded by GTSB & Iowa DOT
- Supported by CTRE staff & students
- **120+** requests annually from
~**50** different public & private entities

Objectives

- Provide easy-to-understand analyses and reports.
- Assist in obtaining, mapping & evaluating crash data.
- Facilitate
 - decision-making
 - effective presentation of information
 - education
- Support safety's 4Es – engineering, education, emergency response & enforcement.

Web Site
